

## Gilbert Et Gilberte (6 )

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2008 OCLC Number: (OCoLC)245535888 Subject: Wind power. Excerpt: . . . EPA Climate Leaders Program have recommended alternative methods for quantifying 22 reductions in greenhouse gas emissions. Although there are variations in methodologies, the process of calculating emissions avoided as a result of wind generation involves several major steps: ( 1 ) Specifying the appropriate geographic areas ( e. g. , power market or National Electric Reliability Council region ) where the avoided emissions occur ( 2 ) Identifying the fossil fuel-fired electric generation that is displaced when wind plants come online ( 3 ) Determining the emission rates for the fossil fuel-fired generation that is displaced in the specific time periods that wind generation occurs. In addition, the following elements may be included in the analysis. In situations in which greater accuracy is required, more detailed analytic approaches can be used to address these issues: ( 1 ) Incorporating seasonal and daily patterns of wind generation and focusing on the avoided emissions of fossil fuel-fired generating units that are operating at the margin ( i. e....
