The aim of this book is to provide an introductory but not simplistic guide to research in the social and behavioural sciences. The book sets out to tackle difficult issues and concepts in a scholarly but accessible manner, providing ample guidance and signposts to further reading. We explore a wide range of questions about research and research methods, including:
What counts as good research and
Research approaches, paradigms, methods and methodology: what are they and what is the difference
What is the so-called qualitative quantitative and
When and where is quantitative research indispensable and
If one suggests that research should be scientific what does that mean and
What methods and methodologies are used in social research and
What is the role of statistics in social and behavioural research How should statistical evidence be interpreted and
What are the ways in which research can, and should, be disseminated and presented
This book is aimed as...
