By Miron Elisha Hard

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 128 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . . . to the stem, yellow, turning slightly ferruginous. The stem is stuffed, somewhat hollow, fibrillose, yellow, ferruginous at the base. These plants are of a showy yellow, and are frequently found in our woods on decayed logs. They are found in July and August. *Flaminula carbonaria*. Fr. The Viscid *Flammula*. *Carbonaria* is so called because it is found on charcoal or burned earth. The pileus is quite fleshv, tawny-yellow, at first convex, then becoming plane, even, thin, viscid, margin of the cap at first inrolled, flesh yellow. The gills are firmly attached to the stem, clay-colored or brown, moderately close. The stem is stuffed or nearly hollow, slender, rigid, squamulose, pallid, quite short. The spores are ferruginous-brown, elliptical, 7x3. 51. I have found this species quite frequently where an old stump had been burned out. It is gregarious. I have only found it from September to November...
