RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Original publisher: Hampton, Va. : National Aeronautics and Space Administration, Langley Research Center ; Springfield, Va. : For sale by the National Technical Information Service, 1990 OCLC Number: (OCoLC)25053149 Subject: Hypersonic planes -- Design and construction. Excerpt: . . . matrix materials in combination with boron, Borsic or silicon carbide fibers. In general, Borsic fiber yields higher strength than the uncoated boron. Silicon carbide fibers are not as strong as boron or Borsic at room temperature, but silicon carbide becomes competitive with the other two at about 1 000F. The elevated temperature behavior and lower cost of silicon carbide makes it an attractive candidate fiber for hypersonic applications. Titanium-aluminides are also potential matrix materials for composites. These composites have potential for use in the range from 1500F to 1800F. Research is directed toward development of silicon carbide fibers and possibly titanium diboride fibers for use with titanium aluminide matrices. Efforts are focused on fabrication techniques by foil rolling, plasma spraying, arc spraying, and powder metallurgy processes. In one process, for example, silicon carbide fibers are sandwiched between layers of titanium aluminide foil and consolidated by hot...

Reviews

Thorough manual for ebook fans. it had been writtern quite properly and valuable. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- **Dr. Catherine Wehner**

Absolutely among the best book I have possibly go through. I have go through and that i am certain that i am going to gonna read through once again again in the future. I am just delighted to tell you that this is basically the finest book i have got go through within my personal existence and could be he finest book for ever.
